Sooty Tern Chicks

1033-05101-500

Pantula flavescens

27 Jan Janet Dragonflies

Three cisterns which hold fresh stagnant water are situated in the center of the island (same as referred to by J.B. Jackson in paper).

approx. 25 dead adults were noted in the cistern (possibly the adult ♀♀ did after depositing eggs). About 100+ cast off skins of dragonfly nymphs were noted about the edge of the ponds and at the least one young adult fly in which the tibiae had only half unfurled. ~~The above was~~ dead, one adult *Pantula*

Red.
Flavescens? was
caught flying about
the people.
